How to send KDA from eckoWallet to Crankk dashboard wallet

Exchanges offering Kadena:
Binance **Chain 2**
KuCoin **Chain 1**
Gateio **Chain 1**
OKX **Chain 1**
Bybit **Chain 2**

Every exchange is using a different Kadena chain.
But, it doesn't really matter, as we can convert tokens through Chains later on.

The one thing to remember is that Crankk operates on Chain 0.

And if you send KDA to your dashboard wallet from a different chain you must convert it using KDA wallets like eckoWallet.

Step 1 First, let's start with setting up eckoWallet, if you have already done it you can skip to step 2.
You will need to set up a password and 12 keywords as a recovery phrase. Write them down and keep them safe :)

Before starting with the steps, it's important to have your public and private keys from **Crankk dashboard** setup in front of you. They are being used to restore the access to your wallet. The private one is the key to your castle, so keep it secret, keep it safe!

Step 2 Now, let's send some Kadena tokens from Binance.
You can use another exchange of your choice as well.
You can buy some KDA using **Convert** or **Trade** options
in Binance.
Go to **Trades** > **Convert**.

You can convert KDA from EUR/USDT/BUSD/HNT and
many more.
Pick the right currency and amount for you, then confirm
the transaction.

Step 3 We have to transfer the Kadena tokens to eckoWallet.
In Binance App, go to Wallets > Spot > Select KDA >
Withdraw > Send via Crypto Network

Paste your eckoWallet address (**k:publicKey**) into
Address tab.
Choose amount to send, hit **Withdrawal** and authorize
the transaction.

Step 4 Wait to receive the tokens in your eckoWallet balance

Step 5 Go to Crankk Dashboard to copy your dashboard wallet address (k:publicKey)
Login with your Google account and pick the wallet icon in top right corner. Type in your password and keep it safe!

If you still don't have a wallet, create a new one.
Save both keys securely to avoid losing your assets!

Copy your address (k:publicKey).

Step 6 Transfer from eckoWallet to Crankk Dashboard
wallet (chain0)
Go back to eckoWallet and click on **Send**.

If you send KDA from Binance then you should see your
balance on **Chain 2**.
KuCoin, Gate and OKX – **Chain 1**
Binance and Bybit – **Chain 2**

Chain 0 ⌄

ADVANCED SETTINGS (OPTIONAL) ⚙️

keys-all PREDICATE

Continue

Set **Source chain** as 2 and **Target chain** as 0.
Paste the Dashboard wallet address (**k:publicKey**) into the
Destination account tab.
Make sure you click on **Advanced Settings** and pick the
keys-all option.

Step 7 Type the amount you want to transfer. (make sure you don't send all KDA, **leave a small amount to pay for the Gas fees**)

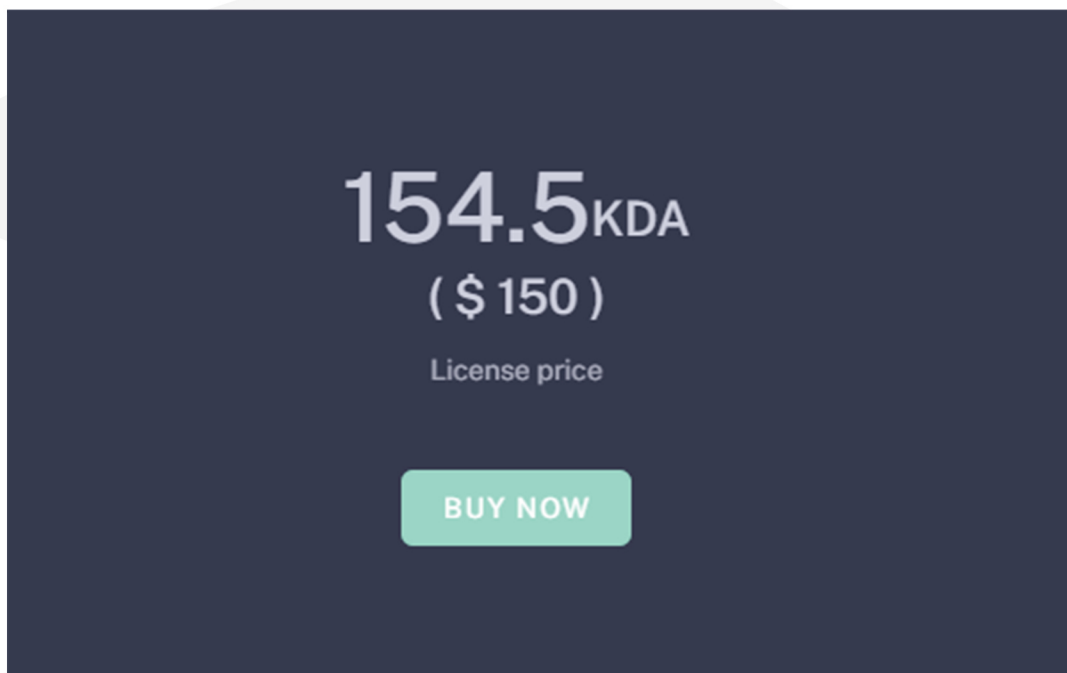

Step 8 Press **Send** and monitor the transfer in **Activities** tab. You might need to confirm the transfer by clicking on **Finish Cross Chain Transfer** tab in **Activities**.

The transaction might take up to 15 mins. Don't close the app before the transfer is complete.

Step 9 Buy the software license

Once KDA arrives in your Dashboard wallet, go to
Dashboard > Join the BETA group (**Enter**) > **Buy**

You need to have min $150 worth of KDA to buy the license.
If you don't the **Buy** button will not be active.

Use your personal code (received by mail)
and
Ambassador code (case sensitive) based on your region.

Clicking the **Buy** button may take up to 15 minutes to
reflect the changes, so please be patient.

If you need any help, you can always ask the Crankk
community or contact Technical support team in **Discord**.
Welcome aboard!
